Parameters

Name	Value
Excavator weight	5 – 9 t
Weight	90 kg
Attachment Plate	CW10 .
Height	940 mm

Description

The RT 70 ripper tooth loosens hard, compacted or frozen soil, stony ground, roots and old road surfaces, so the excavator can then dig the material out quickly with a bucket. The full digging force of the machine is concentrated on a single point, so it breaks ground that a bucket can hardly penetrate, while reducing wear and strain on buckets and on the machine.

The RT 70 is designed for excavators of 5 – 9 t. It weighs 90 kg, dimension A is 940 mm, and it is mounted directly on a CW10 quick coupler.

Typical uses

- Loosening compacted and stony soil before digging
- Breaking frozen ground
- Ripping out roots and stumps
- Breaking up asphalt and old road surfaces
