Engine	Honda GX200 HP
Drivegear	gasoline engine
Maximum height of the splitted wood	550-1100 mm
Working table	390x300 mm
Dimensions	1115x810x2700 mm

Description

The BULL SPL13H log splitter by Ceccato Olindo is an entirely Italian machine made for professional use. It is built with a custom cast steel knife of large size that runs on a guide bushing safeguarding the piston and the frame even under maximum stress, has a very strong frame designed to withstand high power thrusts. Allows you to split knotty wood logs of varying sizes up to a maximum height of 110 or 51 cm. It mounts a bench that allows two cutting heights, 51 cm or 110 cm. It is equipped with additional operating controls on the upper part of the machine that allow the splitting of very large logs. It is possible to add mechanical lifting of the logs as an option. It has a Honda GX200 engine. It is equipped with two wheels for movement made with a special rubber mixture that allows the stones not to get stuck. It is equipped with a safety arch and an adjustable end-of-stroke control system. In this model, as for the others of CECCATO OLINDO, the attention to details is very high, it has hydraulic hoses with screen-printed Ceccato Olindo sheath and couplings that fully comply with the latest CE regulations. The machine weighs about 345Kg. The log splitter BULL SPL13H respects the CE regulations on safety at work.
