Description

Metal-Technik Sweeper OD

The sweeper is used to sweep flat surfaces such as squares, sidewalks, roads by sweeping the waste to the side or pushing it forward. The sweeper is angled to the direction of travel by hydraulics.

The sweeper does not have a waste bin. It is ideal for cleaning paved surfaces that merge with unpaved surfaces where swept material (sand, leaves, etc.) can end up back on the unpaved surface.

When sweeping such areas, there is no need to empty the bin, as well as to prepare a place for storing waste.

The scavenger is also suitable for clearing snow from paved surfaces.

It will be an excellent choice for surfaces with minor unevenness (damaged concrete), where the plow will leave places uncleared of snow.

The machine can be equipped with a sprinkler system to reduce dust formation, activated from an easy-to-use panel. Note:

The sweeper is equipped with a standard brush
