Parameters

Name	Value
Weight	1130 kg
Engine	Kubota D722
Ground clearance	120 mm
Digging depth	1650 mm
Battery	60 Ah
Engine	13.6 HP
Track distance	650 mm

Description

Compact power and precision in the tightest spaces The Eurotrac HE12 is a professional 1.2 tonne mini excavator specifically designed for precision earthmoving in tight spaces. The machine is ideal for landscaping, public works, trenching and other residential or industrial projects where limited access and efficiency are critical. Outstanding technical features: * Premium powertrain: The heart of the machine is a reliable, 3-cylinder, liquid-cooled Kubota D722 diesel engine, which delivers an optimal 13.6 hp (10.2 kW) operating power at 2200 rpm. This configuration guarantees continuous, stable hydraulic pressure with low consumption. * Hydraulically adjustable track: The width of the rubber-tracked chassis can be narrowed and widened (750 mm – 950 mm) via the control panel. When retracted, the machine can easily fit through narrow garden gates or even a standard interior door, while when extended, it provides maximum lateral stability during work. The width of the robust dozer blade can be easily adjusted to the track shoes using the factory extensions. * Versatile work: Thanks to the swiveling boom (Knuckle boom) function, the excavator can work precisely right next to walls or fences. The maximum digging depth of the machine is 1650 mm, while the maximum dumping height is 1655 mm. * Factory standard equipment and adapters: The Eurotrac HE12 includes the mechanical quick coupler and the 3-tooth, 400 mm factory deep digging bucket with reinforced, hardened carbon steel cutting edge (25 liter capacity, 11.4 kN effective breakout force) as standard. Thanks to the built-in auxiliary hydraulics, the machine can be equipped with trenching, slope or even hydraulically tilting buckets, augers and demolition hammers in no time. The Eurotrac HE12 combines rare hydraulic extras in its category (chassis widening, boom rotation) and the durability of the Japanese Kubota engine in an extremely maneuverable, easy-to-transport design.
