Description

The FW fixed (hammer) forestry head is designed to crush branches, trees, stumps and tree remains from felling. It is equipped with special hammers with hard metal tips, which are more resistant and durable. The construction of the rotor with perfect electronic balancing allows excellent crushing. The monoblock chassis system together with the skids for height adjustment. Reinforced and adjustable system allows to work in different heights. The opening gate system can be mounted mechanically or hydraulically. The construction is extremely solid and robust.

- Monohull chassis in anti-wear steel plate.
- Widia hammer rotor shaft.
- Skids for height adjustment.
- Piston hydraulic motor.
- Motor safety valve.
- Transmission by pulleys and belts.
- Front and rear anti-projection chains.
- Back door can be open.
- Crushing capacity up to Ø 30cm.
