Description

The rear collecting brush is an implement carrier on which different equipment can be adapted for collecting and aligning branches (collecting brush) or knife cutting system for organic farming. The hitch is to the three points CAT-I and CAT-II and its telescopic system allows you to move the collector or the disc up to 2.30 mts. from the center of the tractor.

1P and 2P tractor rear brush

Attachable disc at the rear of the tractor, with implement exchange system (weedkiller, disc, brush) for work in clearing or alignment of branches and for all types of tractors.

Standard:

- Tractor 3-point linkage.
- Support foot.
- Telescopic single (1P) or double (2P).
- Lateral displacement of 2.30 mts. of tractor center.
