Description

Professional series of machines specialized in the application of liquid or solid fumigants products into the soil. All the distribution systems are managed by the computer for a precise control of the doses and a proportioned distribution. These machines are specially designed in collaboration with fumigants producers resulting in high safety standards and an optimal and equal distribution of the product into the soil. The series is composed by passive models (without soil processing) and by active models, with stone burier base, which allow a multiple function of the machine. Basic machine Universal 3 point linkage Cat. 2 & 3, Height adjustable lateral pannels, Working depth adjustable by crank handle, Ploughshares mounted with security bolt, Interchangeable wearing plates mounted on ploughshares, Pump operation cardan shaft. Liquid fumigants distribution system: 400 litres polyethylene tank, Reserve tank for clean water, Polyethylene pump, Product maximum pressure valve, Capacity control by proportional valve, Nozzles opening/closing section valve, Multifunction valve for product aspiration, work, cleaning and draining. In-line Removable filters, Moving speed proportioned distribution of the product, Lateral wheel for speed check, In-line flow-meter for distribution management, EPDM pipes and connections, AISI316 nozzles, AISI316 drop-repellent system mounted on ploughshares, AISI316 pressure gauge, Pipe for product aspiration and draining, On board computer for distribution management.
