Description

Professional series of machines specialized in the application of liquid or solid fumigants products into the soil. All the distribution systems are managed by the computer for a precise control of the doses and a proportioned distribution. These machines are specially designed in collaboration with fumigants producers resulting in high safety standards and an optimal and equal distribution of the product into the soil. The series is composed by passive models (without soil processing) and by active models, with stone burier base, which allow a multiple function of the machine. Universal 3 point linkage Cat. 2 & 3, Frame for Mix-Tiller Liquid connection, Adjustable shanks with fixing pins, Interchangeable wearing plates mounted on ploughshares, AISI 316 s/steel nozzles, AISI 316 s/steel anti-drop system mounted on ploughshares, EPDM pipes and fittings, Nozzles opening/closing section valve, Product distribution manifold towards ploughshares.
