Parameters

Name	Value
Working width	2000 mm
Weight	980 kg
Hammer PCs	40 pcs
Sparepart Weight	650 g
V-Belts	6 pcs
Minimum HP	80 hp
CAT	II
RPM	540 rpm
Max tree diameter	15-20 cm

Description

The new generation of Delta Orbit is an improved version of the Delta XL series, designed for heavy-duty, variable terrain conditions. One of the most important advantages of the machine is its configurability: it can be ordered with an open or closed shaft, allowing the user to adapt its operation to the working environment and the required chip quality. The open rotor provides high material throughput in dense, smaller diameter vegetation and difficult, muddy terrain, while the closed rotor provides more controlled work, resulting in a more uniform, finer mulch, especially in brush removal and forestry tasks.

The robust, hydraulically opening front door has a full cover, which increases safety and increases the machine's service life. Side deflectors in front of the door improve material flow, and the improved, replaceable counter knives ensure consistent cutting quality and quick maintenance. The machine is equipped with safety chains, door support brackets and a front support leg, which makes it easy to handle and maintain.

The drive system is made with a uniquely developed two-way drive housing, automatic belt tensioning and efficient belt cooling, thus providing reliable operation even under continuous high loads. The Delta Orbit is the ideal choice for both agricultural and professional forestry work, where performance, reliability and consistent work quality are key considerations.
