

Belafer DFR-180

1.8 m Forestry mower (rotor with 4 chains)

Parameters

Name	Unit
Working width	1800 mm
Weight	1055 kg
Minimum HP	75 hp

Description

The DFR-DFRE forestry mowers are manufactured in 1,30-1,60-1,80 and 2 meters of work. The forest harvester models DFR and DFRE are suitable for tractors from 40HP to 150 HP. Interchangeable chain or blade cutting tools. High speed of hard and resistant work and efficient crushing system. The mowers are equipped with 19mm chains. In G80 quality. The same chain carrier system allows to work with 2 or 4 chains to improve the mowing or shredding of the waste. The DFR and DFRE models of mowers have 4 chains, depending on the size of the machine. The ground supports on this model of maintenance brushcutters are equipped with skids lined in their friction parts with treated steel, and the rear doors for working in the reverse position allow hydraulic opening by means of cylinders. The coupling on the tractor is three-point and CAT category. I-II and -CAT-III. It is also possible in some cases to couple them on hydrostatic tractors or chain loaders by means of a solidary coupling and transmission system by means of a hydraulic engine.

- Reinforced chassis (10mm).
- Height adjustment by skates.
- Transmission with safety clutch.
- Special chains treated.
- rear door can be opened or closed
