Description

The E600C is a second-hand grape stump grinder from 2003. Its different models are compatible with all needs and plant types. For a better cutting quality, it is equipped with steel blades with a length of 39 cm. The model can be mounted on the front of the tractor, ensuring a more precise work. Power is supplied by the tractor's hydraulic suction hose. The 3 hydraulic movements for lifting, tilting and tilt correction allow the machine to better adapt to the line.
