RPM	540 rpm
Max. working depth	18 m

Description

Side-shift rotary tillers fall in the category of light-weight rotary tillers and are designed for primary and secondary tillage in crop farming, truck farming, fruit growing and viticulture.

Due to the capacity for right-hand side shifting, this type of rotary tiller enables working the soil in close proximity to a plant, without any danger of tractor damaging the branches, leaves or other parts of the plant. These machines are available in two classes:

LPF (for easier operating conditions) and SPF (for medium-duty use).
