**Parameters**

Name	Unit
Working width	850 mm
CAT	1N
RPM	540 rpm
Rotor Diameter	48 mm
Max. working depth	18 m

**Description**

Side-shift rotary tillers fall in the category of light-weight rotary tillers and are designed for primary and secondary tillage in crop farming, truck farming, fruit growing and viticulture. Due to the capacity for right-hand side shifting, this type of rotary tiller enables working the soil in close proximity to a plant, without any danger of tractor damaging the branches, leafs or other parts of the plant. These machines are available in two classes: LPF (for easier operating conditions) and SPF (for medium-duty use).
