Blade Thickness	2 mm
Weight	150 kg

Description

Introducing the Belt Rake - the perfect solution for small farm owners who need to efficiently and effectively gather hay or straw from their fields. This machine is designed to be towed behind a tractor, and its high-quality belts and tines make it a reliable choice for collecting and organizing your hay or straw. One of the main advantages of using a belt rake is its efficiency. This machine can cover a large area of land quickly, making it an ideal choice for farmers who need to harvest a lot of hay or straw in a short amount of time. Additionally, the adjustable belts and tines allow you to easily customize the machine to your specific needs, so you can gather the perfect amount of hay or straw for your livestock. Another benefit of using a belt rake is that it can help to improve the overall quality of your hay or straw. By carefully raking and organizing your crop, you can remove any debris or unwanted material, and ensure that your animals are getting the highest quality feed possible. Additionally, the gentle raking action of the machine helps to prevent damage to the crop, ensuring that it remains in good condition during the harvesting process. Overall, if you're a small farm owner looking for a reliable and efficient way to harvest hay or straw from your fields, then a belt rake is definitely worth considering. With its adjustable belts and tines, high-quality construction, and efficient design, this machine can help you to gather and organize your crop quickly and easily, while also improving the overall quality of your feed.
