**Parameters**

Name	Unit
Working depth	180 mm
Weight	35 kg

**Description**

Introducing the Reversible Plough for Two Wheel Tractors - the perfect solution for small farm owners who need a versatile plough that can handle a variety of soil conditions. This machine is designed to be attached to the rear of a two wheel tractor, and its reversible design and adjustable angle make it an ideal choice for breaking up soil and turning over land in both directions. One of the main advantages of using a reversible plough is its versatility. This machine can be used to prepare soil for planting, clear land for construction, or even create furrows for irrigation, all while being able to work in both directions. Additionally, the adjustable angle allows you to easily customize the plough to the specific needs of your property, so you can quickly and efficiently clear away soil and debris. Another benefit of using a reversible plough is that it can help to improve the overall health of your soil. By turning over the soil and exposing it to air and sunlight, you can improve drainage and promote better root growth for your plants. Additionally, ploughing can help to reduce the number of weeds in your garden or fields, making it easier to maintain and cultivate. Overall, if you're a small farm owner looking for a reliable and versatile way to prepare soil or clear land, then a reversible plough for a two wheel tractor is definitely worth considering. With its durable blades, adjustable angle, and reversible design, this machine can help you to quickly and easily prepare soil, clear land, or create furrows for irrigation, while also promoting the overall health and growth of your plants.
