Parameters

Name	Unit
Weight	41 kg
Working width	0.5-0.8 mm
Working depth	150 mm

Description

Introducing the Rotary Tiller for Two Wheel Tractors - the perfect solution for small farm owners who need to prepare soil for planting or gardening. This machine is designed to be attached to the rear of a two wheel tractor, and its powerful motor and rotating blades make it an ideal choice for tilling soil and breaking up compacted earth. One of the main advantages of using a rotary tiller is its efficiency. This machine can quickly and easily break up soil, making it easier to plant crops and gardens. Additionally, the adjustable depth control allows you to easily customize the tiller to the specific needs of your property, so you can prepare soil for a variety of different plants. Another benefit of using a rotary tiller is that it can help to improve the overall health of your soil. By breaking up compacted earth and loosening the soil, you can improve drainage and promote better root growth for your plants. Additionally, tilling soil can help to reduce the number of weeds in your garden, making it easier to maintain and cultivate. Overall, if you're a small farm owner looking for a reliable and efficient way to prepare soil for planting or gardening, then a rotary tiller for a two wheel tractor is definitely worth considering. With its powerful motor, rotating blades, and efficient design, this machine can help you to quickly and easily prepare soil for planting, while also promoting the overall health and growth of your plants.
