### Parameters

Name	Unit
Weight	80 kg
Hydraulic oil	8 L
Dimensions	1840x840x780 mm

### Description

In the log splitters, the splitting force is measured directly at the splitting wedge so that this value corresponds to the actual fitting splitting force. Many other sellers give unrealistic values here, such that are never achieved in practice.

The maximum log opening is 50 cm.

The log splitter is easy to operate. You can start the engine simply by pulling the recoil starter cord, and it even starts well in below freezing temperatures.

You can transport the device easily using the existing tow hook and towing assembly. The device is not, however, approved for road traffic, i.e. you are not allowed to tow it behind a passenger car on public roads. The exception to this rule is towing with a country or forestry tractor. In this case you are allowed to tow the log splitter on public roads. Make sure you observe the highway code though (lighting, indicators, registration plate, etc.). Alternatively, of course, you can put the log splitter onto a trailer using a ramp.

Due to the narrow total width of approx. 84 cm, you can even transport the device with ease on a conventional trailer.

Along with the splitter we deliver a 4-way wedge free of charge, which can be simply pushed over the splitting wedge. You can change between wedges in a matter of seconds!

Using the splitting wedge or 4-way wedge you can also split logs of a larger diameter in one cycle. The special thing with this device is that the splitting wedge/4-way wedge is fixed and you push the wood against the wedge with the cylinder. If a piece of wood gets stuck on the wedge, all you usually need to do is simply move onto the next piece! In this way you can work quickly and efficiently.

The hydraulics have been made in such a way that the splitting wedge can be held in all positions and can be moved forwards or backwards as desired. The force always remains the same and the splitting wedge, unlike many competing products, does not have to return to the starting position.

The Jansen HS-12L53 is delivered with a high-quality Kohler engine.

Technical specifications:

4-stroke OHV engine, 6,5 HP

Fuel type: petrol

Starter: Recoil starter

Weight: Approx. 80 kg without fluids

Amount of engine oil: approx. 0.7L (10W40 or 15W40)

Amount of hydraulic oil: approx. 8.0L (HLP46)

Towing speed: Max. 25 km/h

max. log opening: 50 cm

Oil pressure: 240 bar

Cylinder speed: approx. 6 sec. (for each way)

Splitting force: 12 tons (measured value)

4-way splitting wedge, Length 15 cm (included in delivery)

Splitting wedge, Length 15 cm (included in delivery)

Dimensions: approx. 184x84x78 cm (LxWxH)

Dimensions of packaging: approx. 157x64x48 cm (LxWxH)

Weight including packing: approx. 130 kg
