### Parameters

Name	Unit
Hydraulic oil	7 L
Dimensions	1550x940x950 mm
Weight	115 kg

### Description

The Jansen HS-12L53E is a very powerful horizontal log splitter of the compact class. Equipped with a high power 230 V electric motor, this heavy duty splitter can easily handle logs up to 53 cm long. The electric drive ensures a quiet work environment and makes the splitter extremely easy to operate.

EFFICIENT. QUIET. POWERFUL.

The hydraulics have been conceived in such a way that the splitting wedge can be held in all positions and can be moved forwards or backwards as desired. The force always remains the same and the splitting wedge, as is the case with many competing products, must not be returned to the starting position. In our log splitters, the splitting force is measured directly at the splitting wedge so that this value corresponds to the actual splitting force.

WHAT DO WE DO DIFFERENTLY?

The splitting wedge can be stopped in any position

Towing bar mounted and transport handle on the device

Actual 12 tons (measured value)

230V Electric engine

TECHNICAL DATA:

230V electric motor, 2.2 kW

Amount of hydraulic oil: approx. 7 L (HLP46)

Max. log length: 53 cm

Cylinder speed: approx. 7 sec. forward, 6 sec. reverse

Splitting force: 12 tons (measured value)

Splitting wedge length: 14 cm

Assembled dimensions: 155x94x95 cm (LxWxH)

Package dimensions: 128x57x46 cm (LxWxH)

Weight: approx. 115 kg without fluids

Weight including packaging: approx. 136 kg
