Parameters

Name	Value
Weight	155 kg
Cutting width	600 mm

Description

The flail mower HSM-60 easily tackles high grass and dense undergrowth. Thanks to the Y-type blades mounted on swivel bearings, this mulcher is ideal for high, thick grass and undergrowth. In the process, the material is finely shredded and at the same time, distributed evenly across the entire cutting width.

The drive wheels installed with a powerful profile for fields, provide for ideal traction on soft ground.

The powerful and reliable petrol engine with 8 HP has sufficient power. The steering bar, which is height adjustable without requiring tools, can be very easily adjusted in height and laterally without any complications and ensures fatigue-free work.

Thanks to the mower and traction drive, which can be operated separately, and the specifically tuned gear mechanism, it is possible to adapt the speed to the given conditions, without reducing the quality of mowing. The mono-wheel coupling (differential) simplifies steering and therefore, enables a greater manoeuvrability of the machine.

The hatch on the front of the mower deck automatically opens in the case of higher shrubbery and undergrowth and can also be opened manually for the purpose of servicing, etc. This of course also simplifies the replacement of the Y-type blades.

Technical specifications:

Engine: 4 stroke gasoline motor, 252 cc, 8 HP, Loncin

Cutting width: approx. 600 mm

Adjustment of the cutting height: centrally, infinitely variable from 20-80 mm

Steering bar: can be adjusted in height and laterally

Blades: 16 Y-type blades

Gear mechanism: Mono-wheel coupling

Drive: 3 forward gears and 1 reverse gear

Assembled dimensions: 1680 x 732 x 1163 mm

Weight: approx. approx. 155 kg

Package packaging: approx. 130x77x85 cm (LxWxH)

Weight including packaging: approx. 178 kg
