Description

JFC outlet drinkers allow used water to be emptied quickly and easy to clean. This simple and efficient system enables farmers to increase the frequency of cleaning their drinkers, keeping their animals fresh and clean drinking water. Each drinker has a float valve with a capacity (35L / min) for quick filling after cleaning. The valve maintains a constant water level (100L), which allows you to water up to 5 cows at one time. The drinkers are finished with a smooth surface to ensure safety and easy cleaning. Available with a galvanized frame mounted to the floor or wall. Optionally, it is possible to install 250V or 24V heating plates with a transformer that prevent water from freezing. (TOT-F: TOT-W)
