Description

Our Calf Isolation Unit is an individual calf housing unit which is ideal for the effective isolation of calves. The polyethylene body will ensure the calf is kept warm and draught-free. The Calf Isolation Unit is lightweight, easy to disinfect and comes with heat lamp, bracket and a removable calf slat for drainage and heat lamp (bulb not included). An additional removable tray underneath the unit ensures that all waste is contained and can be disposed of separately to comply with Farm Assurance Schemes. The unit provides for more effective feed monitoring, reduces bedding requirements and can help to lower calf mortality rates.
