Description

JFC offers nipple feeders that are an efficient way to feed several calves at the same time. Each feeder is equipped with a nipple check valve. The teats are designed to stimulate the suckling reflex, ensuring the optimal amount of milk for your cuts. The feeder is equipped with two-strong hooks, thanks to which we can place them in many places of the farm, e.g. on the gate or fence. Perfect for use with a JFC calf house to hang over a fence. Constructed with minimal gaps, they are hygienic and easy to clean. They can be stored upside down, which speeds up their draining and drying. Easy to store and transport (you can stack one feeder and another). Available in single-chamber and split multi-chamber versions.
