Description

Water troughs offered by JFC are made of high quality polyethylene, which provides high resistance to mechanical damage. Each drinker is resistant to UV rays and each drinker is UV resistant and has a high resistance to freezing/thawing, thanks to which they can be On top of that these have high resistance to freezing/thawing, so they can be installed indoors and outdoors. JFC offers a wide range of innovative drinkers available in different shapes and sizes (50 - 1590L), which are easy to transport, install and operate. All chamber drinkers offered by JFC include valves and floats. They are equipped with a float valve with a fast flow (up to 175L / min; min. Pressure 3 bar). The valve is protected by a plastic cover with easy access. Made of reinforced plastic for better strength and durability. They have high resistance to freezing / thawing. They are finished with a smooth surface to ensure safety and easy cleaning.
