Length	2500 mm
Height	750 mm
Width	1140 mm
Capacity (m ³)	0.9 m ³
Capacity (kg)	340 kg
Weight	355 kg
Minimum HP	14 hp

Description

This mini fertilizer spreader from Kraffter enables you to fertilize the land quickly and easily. The spreader is wheel driven, so you don't need a PTO. This makes it possible to use the spreader behind your quad, riding mower or mini tractor. This makes the spreader ideally suited for smaller livestock farms, hobby farmers or horse stables.

14 hp is required for use behind the mini tractor. Do you want to attach the manure spreader behind a quad? Then you need a quad with at least 250cc.

We know better than anyone how much manure is produced by livestock and understand the importance of spreading it quickly and easily across the country. Not only does this help you to get rid of the manure, it is also good for the growth of the crop.

Due to its dimensions, the muck spreader is easy to maneuver and can come close to or even in the stables. The spreader is easy to use and low maintenance.

The manure chains have a T-rod profile, which means that they last three times as long as standard manure chains. The bottom is provided with 2cm thick polyvinyl. The spreader has a shaft with 8 steel blades. These are designed in such a way that there is a wide and even spreading pattern.

The leveled capacity is 0.59m³, the maximum accumulated capacity is no less than 0.9m³.

Curious about how the manure spreader can make your work easier? Make an appointment immediately and come by for a viewing!
