Parameters

Name	Unit
Working width	550 mm
Weight	210 kg
Oil flow	40 l/min
Side move	500 mm
Vertical shift	500 mm
Stripping roller speed	150-600 rpm
Leaf stripping head speed towards canopy	variable
Hydraulic unit with heat exchanger	recommended

Description

A revolutionary machine with, thanks to an accurate and precise leaf-stripping system, comparable to hand made procedure, allows to effectively remove leaves from the earliest stages to a mature and fully formed cluster. The working head automatically moves towards the vegetation maintaining a correct distance from the vegetation as configured by the operator through the control system of the machine. The amount of removed leaves can be dosed with a surgical precision, by pressing the +/- buttons that controls the rotation rate of the stripping roller during work.

- Reversible frame.
- Working head with 45 cm. or 55 cm. height
- Console with all controls integrated on the joystick
- Frame with rotating head operation for the right side or the left side of the tractor
- Automatic hydraulic approach the canopy
- Regulation from console of the intensity of stripping during the work of the machine
- System of reverse rotation rollers to eject debris
- Attachment frame to the tractor
