Description

Metal-Technik Manure scraper

Hydraulic manure scraper in zinc three-point linkage category II + euro + pallet truck

Galvanized manure or feed scraper is a versatile agricultural tool that is used for the efficient collection and distribution of manure or feed on livestock farms.

Thanks to galvanizing, the steel elements of the scraper are covered with a layer of zinc, which increases their resistance to corrosion and mechanical damage, ensuring long tool life even in difficult working conditions.

The galvanised surface also makes it easy to clean and maintain the tool, which is crucial for its efficient and reliable operation.

Standard three-point linkage Cat. II / Euro / Pallet truck
