Description

Metal-Technik Municipal Sweeper MT1

The MT1 municipal sweeper is designed for sweeping flat surfaces such as streets, sidewalks and squares. It has two disc brushes that scrape the material inside and a roller brush that sweeps it into the tank.

The machine combines compact dimensions and great capabilities. Hydraulically foldable disc brushes make it easy to unfold and fold the machine without leaving the tractor. By folding inwards, they reduce the width of the sweeper, so that when folded it is only 1.7m wide (the working position is 2.4m). The large waste container allows uninterrupted work without unnecessary downtime, and the high discharge allows it to be emptied directly onto the trailer.

The sweeper has its own hydraulic system. Thanks to its own PTO-driven pump, it is ideal for small tractors from 28HP. In addition, the oil cooler guarantees trouble-free operation of the machine even on hot days. The machine is controlled by an easy-to-use controller located in the cabin.

The sweeper is equipped with lighting, a warning lamp and a sprinkler system as standard. It is the ideal choice for sweeping large areas with the use of small tractors, effectively using their potential.

MUNICIPAL SWEEPER MT 1

Three-point linkage cat 1 large and 2 (PTO drive 540 RPM, own hydraulic system - folding disc brushes and garbage dumping, lighting, warning lamp, sprinkler system)
