Minimum HP	61 hp

Description

Mower-shredder RG-300 (two rotor) is a 3-point hitch machine, designed for aggregate with 0,6 - 0,9T class tractors, PTO - driven. Mower-shredders are useful in orchards, fields or meadows. We can use shredder for mulching grass, crop residue, straw, branches (up to ø30mm), bushes. Mulched plants lay on ground and became organic fertilizer. Machine has adjustable working height (30mm and higher), which allows to work even on layed plants. Higher shredding level allows to mulch haulms and roots crop residue. Machine can't be used on terrain covered with stones. As the only company in Poland, we produce machines equipped with modern gear unit PK10 with power input of 55 kW.

- adjustable height of rear wheels
- gear with output power of 55kW
- torison hitch
- adjustable cutting height
