CAT	I
Weight	380 kg
Number of rotavator blade	28 pcs

Description

BOXER SB stone burrier with rear roller

The Boxer SB stone burrier with levelling roller is recommended for even, reclaimed and flat soil cultivation. As the machine's shaft rotates in the opposite direction to the direction of travel, one of the advantages is that the soil is much smoother and looser.

The other advantage of the opposite direction of rotation is that if there are small stones, pebbles, etc. in the soil, they will disappear from the top of the worked area and only the soil will remain. Ideal for small contractors and farmers, garden builders.
