Parameters

Name	Value
Weight	700 kg
Oil flow	35-75 l/min
Hydraulic pressure	175-225 bar
Working width	Left: 12000 Right: 10000 mm

Description

The SHC Straw Spreader from Flingk is a compact and lightweight straw spreader. The machine is specially designed for use on small farm and telehandlers. The SHC type has a throwing fan with an ejection that can be used to regulate the throwing distance and thus the bedding depth from the vehicle cabin. The SHC R has a 275° rotatable discharge for fast and flexible work.

The Flingk SHC 1450 R is a high-performance, self-loading straw bedding bucket designed for versatility and precision. The "R" designation stands for its 360-degree rotating discharge chute, making it the perfect tool for complex barn layouts.

Key Features:

360° Rotating Discharge (R-Model): The hydraulic chute allows for straw distribution in any direction—left, right, or straight ahead—providing maximum flexibility in narrow aisles.
Self-Loading Design: Its rugged frame allows the operator to scoop up bales directly from the ground, eliminating the need for an additional loading machine.
Versatile Processing: Efficiently handles both square and round bales. A heavy-duty shredding roller breaks down the straw before the high-capacity turbine blows it out.
Impressive Range: Depending on the hydraulic flow, it achieves a throw distance of up to 10-12 meters, ensuring full coverage even in large deep-litter areas.
Compact & Powerful: Specifically engineered for telehandlers and wheel loaders, maintaining a low center of gravity for better machine stability.
