| Wedgestroke                         | 1140 mm              |
| Maximum height of the splitted wood | 540 - 1140 mm        |
| Working table                       | 360 x 410 mm         |
| Weight                              | 354 kg               |
| Dimensions                          | 1100 x 810 x 2700 mm |
| Minimum HP                          | 18 hp                |
| Drivegear                           | tractor PTO          |

### Description

The wood splitter SPLT16 with 16 ton thrust is a machine entirely made in Italy working with cardan shaft made mainly for professionals, in fact it is built with a large knife, guided by skids along a steel guide, which even under maximum effort safeguards the cylinder. It allows to split knotty wooden logs of variable dimensions up to a maximum height of 110 or 51 cm. It is equipped with additional drive controls located in the upper part of the machine that allow to split very large logs. It is equipped with a high capacity pump that guarantees a powerful thrust and a high working speed. It is also equipped with 2 wheels for moving and a three-point hitch for the tractor. It is equipped with a safety arch and automatic adjustable limit switch control system. It needs a minimum 18 HP tractor to be operated.
