Description

These machines process the soil and bury stones, clods, debris and cultural residues with great efficiency, even in difficult conditions and in not previously prepared fields. The inverted rotation of a special rotor (opposite to the forwarding direction) combined with a selector rake and a levelling bar cover the buried material with a fine and clean soil layer. Stone buriers simplify the seeding/transplanting operations of several vegetable- and special crops creating very well formed, stable and porous cultivation beds. This series is very large and it's composed by single, double, triple fixed and folding/foldable machine to suit every kind of job and tractor power. Higher Clearance between blades & frame, Universal 3 point linkage Cat. 2 & 3, Single speed gearbox, Lateral transmission driven by chain in oil bath, Rotor Ø 620 mm, Single rotor up to mod. 350; 2 rotors with central support from mod. 380, Automatic chain tensioner on spring, Non-driven side in oil bath, Front dual metal face seals in oil bath on rotors, Removable flanged rotors, Rotor fitting 6x spade blades per flange, Lateral scraper blades on rotor, Wearing steel protection counter-flanges, Lateral transmissions with cardan shafts, Rear vibrating selector rake with independent fingers on springs, Cardan shaft with shear bolt torque limiter SB type (1"3/8 Z=6 tractor side yoke) up to mod. 400, Central cardan shaft with protections + 2 lateral cardan shafts with shear bolt torque limiter SB type (1"3/8 Z=6 tractor side yoke) from mod. 426
