Parameters

Name	Unit
Working width	2100 mm
Weight	680 kg
Minimum HP	40-50 hp
Number of Y-Blade	40 pcs
RPM	540 rpm

Description

The T-DSPH 2100, with a 210 cm working width and specialized Y-shaped blade pairs, is purpose-built to shred green and woody residues beneath fruit trees. Its spring-mounted rotor delivers balanced rotation, minimizing clogging and preserving soil structure. Adjustable working depth adapts quickly to varying vegetation and soil conditions while producing a fine mulch. Heavy-duty, wear-resistant cutting edges ensure long service life, even when handling dense pruning debris. Recommended for fruit growers who require clean, consistent residue management around their trees.
