Description

Spring Cultivator tills the soil on the surface and it does not disturb deep layers. It is generally used for flatten the surface for smoother surface. It prepares the seedbed after primary tillage. It breaks the weeds on the field and mixes the wastes with the soil. It is a combination with spring hoes and revolving harrow.

It does not turnover the soil and it does not break the deeper structure.
It crumbles the soil surface, provides higher chances for plants to grow, in this way, it increases the rates of yield.
Roller on the back provides a smoother soil surface before planting.
