Required power	12 KW
Performance (HP)	13 hp
Performance (Kw)	9 kw
Drivegear	gasonline engine

Description

The Turbo 400 is a high-performance grass and leaf vacuum cleaner that can be used in places that are inaccessible to other devices. The Turbo 400 meets all relevant safety requirements set by European standards.

Ideal for municipalities, professional companies dealing with city management, and contractors, where it is important to quickly collect fallen leaves in large areas and to continuously maintain the cleanliness of the settlement or site. The frame and fan are designed for a long life and are made of high-strength Hardox steel. The ergonomic design, easy-to-maneuver support wheels and 5m long suction hose make work simple, fast and cost-effective.
