Parameters

Name	Value
Number of hoes	4 pcs
Working width	2400 mm
Working depth	60 mm
Minimum HP	120 hp
Length	2400 mm
Width	2480 mm
Height	1570 mm

Description

Subsoilers are intended only for deep soil cultivation without compromising its top layer. They loosen and aerate the soil.Subsoiling breaks the "plow-shaped sole" thereby restoring normal water and air conditions in the soil. In this tillage type doesn't mix the surface and deep layers of the soil. It should preferably be done immediately after harvest, when the soil is dry. The machine can also be used to prepare the soil before planting fruit trees, berry bushes and plants with deep root system.
