Parameters

Name	Value
Number of hoes	1 pcs
Weight	290 kg
Minimum HP	32 hp
Working depth	450 mm

Description

Subsoilers Musca are intended only for deep loosening of the soil. Spring tooth harrow cooperating with it rakes and levels the surface of uplifted soil, which limits the evaporation of water from the soil and accelerates the emergence of seeds sown during harvesting. The treatment should be applied on fields with a "plow-shaped sole", preferably after harvest, when the soil is dry. The machine can also be used to prepare the soil before planting fruit trees, berry bushes and plants with deep root system. The subsoiler is made of a strong construction frame. The offer includes 1-, 2-, 3- and 4-teeth with a spacing of 75 cm. The effective working depth is 45 cm.
