**Parameters**

| Name | Unit |
|----------------|---------|
| Working width | 3200 mm |
| Number of hoes | 32 pcs |
| Weight | 605 kg |
| Minimum HP | 75 hp |

Description

Tilling sets Corvus are designed for preparing the soil for sowing during one pass. They can be used to crush solids, destroy encrusted soils and destroy weeds and mix mineral fertilizers with soil. The machine is equipped with light spring teeth, ended with a replaceable coulter. Teeth are mounted in 4 rows on the cultivator frame. The distance between the teeth is 100 mm. On the back the unit can be equipped with floating string rollers or with springs pressure with a diameter of 295 mm. The working depth of the machine is determined by means of support wheels and it is 12 cm. For heavier soils, where there is a large number of solids, it is recommended to use a front roller that will crush and break them. The tilling set can be equipped with a drawbar for easier connection of the machine to the tractor. Despite the working widths above 3.0 meters, they can be transported on public roads, because the side arms are folded by hand.
