Parameters

Name	Unit
Working width	2600 mm
Number of hoes	6 pcs
Weight	810 kg
Minimum HP	102 hp

Description

Skimming units Apus are designed for cultivating fields after maize harvesting, on concise and heavier soils. The machine is equipped with coulters with cutters, which ensure a deeper mixing of crop residues with the soil, and the roller (tubular or V-ring) that cooperates with it presses the fluffed soil to the ground. A large tooth spacing of 42.5 cm and a height under the frame of 65 cm ensure smooth operation on fields with plant debris, and a screw or spring fuse protects against damage when moving over an obstacle. Fixing the leveling discs (plain or toothed) on the tilting frame of the tubular shaft is advantageous due to the cushioning of overloads and the change of their position with the change of the position of the shaft. The shaft also allows setting the machine's working depth to 15 cm.
