

Boxer VM 290 XL**Hydraulic sweeper for tractors 290 cm****Description**

The Boxer VM XL sweepers are hydraulically driven, CAT II, with 3-point hitch, available in 2 working widths. The sweeping direction can be easily changed from right/left side to right/left side from the cab by means of a work roller. Thanks to this function, the sweeping intensity and the working width of the sweeper can be flexibly adjusted to the conditions. The working height is adjusted by 2 guide wheels at the front and 1 follower wheel at the rear, which can be adjusted by tapping the 80 cm diameter circular brush, which is also hydraulically driven, in the event of wear, thus extending the life of the brush.

Available in 2 working widths:

VM 260 XL - 260 cm

VM 290 XL - 290 cm
