**Parameters**

Name	Value
Working width	700 mm
Weight	50 kg
Oil flow	40 l/min

Description

The hydraulic trimmer is a device which is hung by a bracket on the mower-cutter. It is designed to mow grass under fruit trees in places that are difficult to reach by mowers and shredders. The mower support is mounted on a hinge, which makes it possible to assemble it for transport. The device is mounted on the side wall of the mower-chopper and is powered from the external hydraulic system of the tractor. The height of the mowing propeller is dependent on the height of the aggregated machine.

- repeal working element
- soft cover rubber
- easy sliding plate
- hitch to front linkage of the tractor 200 euro
